Colonoscopy Report

NewCura Health
200 Unity Circle North, Suite A
Lee's Summit, Missouri 64063

Name:	Zachary Stokes		
MRN:	192214	**DOB:**	5/1/1973
Gender:	Male	**Age:**	53
Date:	11/3/2026	**Time:**	10:44 AM
Account:	A16129		

Endoscopist(s):
John Collins, MD

Referring Physician(s):
Gudrun Cardoza, MD

Medication(s):
See Anesthesiologist Report

Indications:

Routine Screening - Average Risk (Z12.11)

Description of Procedure:

Informed consent was obtained with the risks, benefits, and alternatives to sedation and procedure explained, including but not limited to: infection, bleeding, aspiration, perforation, adverse medication reaction, missed diagnosis, and missed lesions. The patient verbalized understanding and signed the informed consent form to proceed with the sedation and the procedure. No contraindications were noted on the physical exam. Patient re-examined and no interval changes noted from preoperative history and physical. After the patient was rolled into the procedure room, two methods of identification were used to identify the patient and the procedure to be performed prior to the procedure. Anesthesia was administered by anesthesia service. The patient was placed in the left lateral decubitus position. Once the patient was comfortable a digital rectal exam was performed, and no masses were palpated. The instrument was inserted into the rectum and then advanced to the cecum. The cecum was identified by the appendiceal orifice, the ileocecal valve and photo documentation. The withdrawal time from the cecum was 0 minutes. A retroflexion was performed in the rectum. No blood loss occurred during the procedure.. The quality of the prep was good. The oxygen saturation and skin color were normal. The patient tolerated the procedure well. The patient will be recovered per established procedures and protocols upon discharge from the endoscopy suite.

Endoscopic Diagnosis:

Normal Colonoscopy to Depth of Insertion (Z71.1)

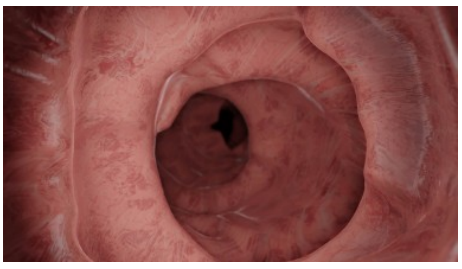

Suggested Billing Codes:

Colonoscopy, flexible; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure) (45378)

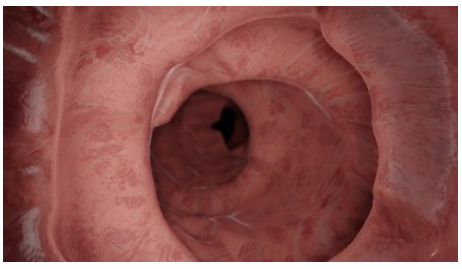

Recommendations:

Colonoscopy recommended in ten years.
